All the technical documentation has already been delivered from the USSR and is now under study at the Central Designing Office of the Machine Industry in Bytom.

7. The production of water turbines of Soviet design is being planned in Poland on a large scale. The total power of water turbines to be manufactured and installed in Poland in the ten year period from 1953 to 1963 will represent 1,500,000 kw of electric energy at the end of this time. This will be almost equal to the total 1953 electric power output of all the thermal power stations. The technical documentation of the water turbines to be built has not yet been delivered from the USSR. When it does arrive it will be sent to the Central Designing Office of the Machine Industry in Bytom.
